Work Experience:**Re Sustainability pvt**

Gachibowli, Hyderabad, Telangana

Full Stack Developer (August 2022 – present).

GHSL Technologies Pvt (Pay-Roll), Kukatpally, Hyderabad, Telangana

JAVA Developer, June 2020 – August 2022

No of Projects Delivered: 10

Project 1: ReOne Enterprise Application (August 2022 – present)

-

- Team Size : 1
- Technologies used: Java, Spring MVC, JDBC Template, HTML, CSS, jQuery, MS SQL Server
- Application Servers: Tomcat 8.5.
- Environment : Eclipse IDE
- URL : <https://appmint.resustainability.com/index/>

Description:

- ReOne is all in one place Application for whole organization where every employee can access every Application for internal and external use....
- Every Department people will have their own set of function according to their Session details.

Roles & Responsibilities:

- As I'm only one in the Team, I'm taking care of the project from scratch.
- Creating all the pages and forms for the project and testing them as per the requirement.
- From creating project to Deployment, reporting daily status and preparing documents for further development.
- Back-End logics and testing, UI design and responsive, setting reminder mails for pending actions via cron job

Project 2: PMIS (Project Management Information System) (September 2020 – June 2022)

- Team Size : 3
- Technologies used: Java, Spring MVC, JDBC Template, HTML, CSS, jQuery, MySQL Server
- Application Servers: Tomcat 8.5.
- Environment : Eclipse IDE
- URL : <https://www.syntrackpro.com/pmis>

Description:

(PMIS) is a one or more software applications and methodical process for collecting and using project information. Mumbai Railway Vikas Corporation Ltd (MRVC Ltd) a Mumbai railway government application which I involved in development was managed by PMIS.

Roles & Responsibilities:

- As I work at Client location, My Major role is to Communicate with client directly and manage them.
- Taking input from client and Sharing Modules to colleagues according to their roles.
- Providing security by creating multiple Interfaces based on roles (only IT Admin can view all the forms) with encrypted password and implemented one-way permission to all the modules in a single page.
- Able to create RWD (Responsive Web Design) pages.
- Creating pages displaying rows using Data Tables (server side / Client side) in grid with respective filters using Ajax calls on user selection.
- We made same JSP file for both Add and Edit Forms using model action value.
- Validation data and apply hide and show functionality to particular fields.
- I have developed a logic for Reference forms (native fields like Genders, Marital Status, Cities, Towns, etc.)
 - ✓ Performing CRUD operations, will reflect in all forms of respective field value.
 - ✓ Displaying Table names where reference tables act as foreign key and count of each value used in each table.
 - ✓ Can make changes in existing value even though that value been used in other main tables, that value will change in every respective main table.
- Structure design for nested Tables in MySQL DB and manage data for different module.
- Upload / Export Excel Data with/without filter selection with validation using Apache POI tool, if any error throws while uploading, row numbers with incorrect data will be displayed at page as error message
- Basic knowledge in creating new branches and git like pull and push creation of branch

Declaration: I hereby declare that all above information is true according to my knowledge.
